

Combined Table

(Model: 166/160 Series)

USER MANUAL

Chapter 1 Installation (Main Body)

1. This model includes the following accessories:

Cable of chair*1 (in the chair carton)	Silicone blockings for the table-top*6	Mounting screws of small table-top *6
Cross screwdriver*1	12/14 open-end wrench*1	Main machine power cable*1
8A fuse*2(spare)	Inner hexagon spanner*6	

*the accessories should be subject to actual packages

2. Unpack the carton of main body, remove the 2 fixing screws on the tray with the open wrench, then lift the main body and place it to the ground;

3. Unscrew the 4 screws circled to install the foot pedal, adjust to make it stable;

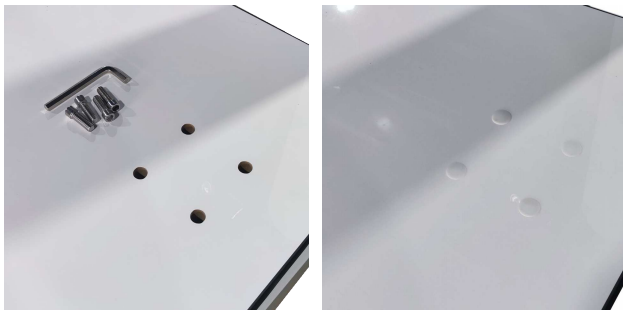

4. Unscrew the 4 screws on the table-top bracket to set aside, open the side cover;

5. Lift the large table-top above the bracket and plug the 2 power cables down into the bracket guide hole;

6. Align the screw holes and put the large table-top down, screw in 4 inner-hexagon screws (M10) and cover them with silicone blockings;

7. Connect the two sets of plugs in the main body, 6pin match with 6pin, 9pin match with 9pin, and cover back the side cover.

If the small table is pre-installed, please jump the step 8-10

8. Pull out the big drawer, unlock the lock switch on both sides, remove the drawer;

9. Place the small table-top as shown, align the slider below with the screw holes and screw in 4 screws;

10. Make sure that the embedded sliding bar has been pulled out, reinstall the large drawer, when you hear the click voice, then push the drawer back;

11. Take out the swing arm, connect the power cord between the main body and the swing arm, put the cord down into the hole, then insert the swing arm;

< the left and right swing arm as shown in the below >

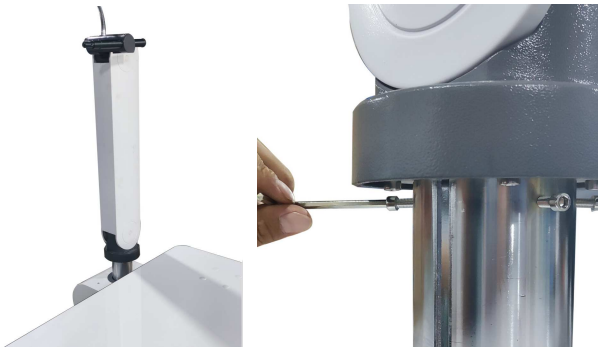

< the rotating swing arm as shown in the below >

12. Adjust the direction of swing arm make it to be perpendicular to the main body, then use the inner hexagon spanner to lock the swing arm;

< the left and right swing arm as shown in the below >

< the rotating swing arm as shown in the below >

13. After completing the above installation steps, check the overall stability of the combined table, if not perfect, adjust the foot-pad at the bottom of machine.

Chapter 2 Installation (Motorised Chair)

1. Remove the fixing screws on the chair base (as shown in the below) and set the chair base aside;

2. Take out the cushion and backrest, remove the 4 screws on both sides of the backrest and set aside;

3. Install the backrest as shown in the below, cover the plastic parts after tightening the screws, and repeat above operation on the other side;

4. Take out the handrail (see the mark in the bottom, R means right side, L means left side), remove the 10 screws at the bottom of the cushion and set aside;

5. Install the handrail as shown in the below and repeat the operation on the other side, then install the headrest and waist pillow;

6. For easy to install, connect the line between the chair base and the main body, raise the chair base up to the topmost height through the control panel;

7. Align the holes in the chair base and place the assembled chair body on it, then tighten the 6 screws, so far, the chair is completely installed.

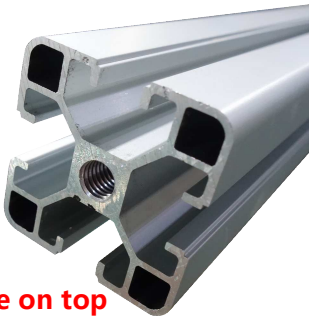

8. Repeatedly test whether the lifting function is normal.

Chapter 3 Installation (Projector Pole)

1. Open the package and take out the 2 poles;

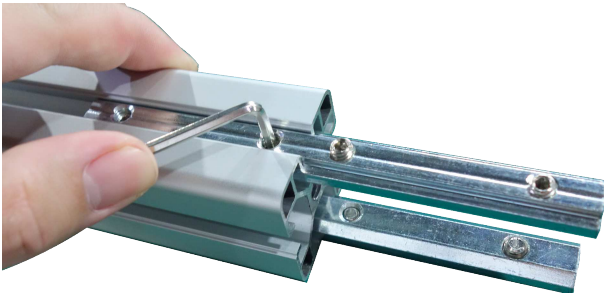

2. Observe the section of the pole, the threaded middle hole is used to connect the top plate;

this side on top

3. Take one of the pole, insert the connector half the length from the unthreaded end of the middle hole, and tighten the screws;

4. Align another pole with the connector, insert it totally, screw them tightly;

5. Insert 2 short connectors from the bottom of the pole (make sure they are on the same side as the long connector in the middle of the pole), insert the fixing bracket, check if the pole is vertical to the base, then screw them;

6. Align the fixing bracket to the screw holes on the bottom plate and tighten the screws. Align the top plate to the screw holes and tighten the screws;

7. Embed the power cable into the groove of the pole and seal it with the edge strip, so far the installation of the projector pole is completed.
